PROJECT	Mobile App Wireframing / UI-UX Design
DESIGN STYLE	Professional Blue & White
TOOLING	Wireframe concept and prototype planning
STUDENT	[Your Name]
DEPARTMENT	Computer Science and Engineering
COLLEGE	[Your College Name]
SUBMISSION DATE	[Insert Date]

1. Project Overview

StudyMate is a mobile application concept designed to help students organize academic activities. It brings study schedules, assignments, task priorities, deadlines and progress information into one simple interface.

Project objective

To design a clear and accessible mobile app wireframe that helps students plan study sessions, manage academic tasks and monitor completion. The current deliverable is a low-fidelity design concept, not a working reminder or account system.

Target users

College and university students who manage multiple subjects, assignments, study sessions and deadlines.

2. User Research

Research focus: understand how students currently plan study time, track assignment deadlines and decide which tasks to complete first.

Proposed interview questions

1. How do you currently keep track of assignments and deadlines?
2. What makes it difficult to plan your study week?
3. How do you decide which task to do first?
4. What reminders or calendar features would help?
5. What information would you want on a study dashboard?

Research integrity note: The user needs and personas in this report are initial design assumptions. Replace or supplement them with real interview responses before describing them as findings.

Initial user needs and design responses

User need / problem hypothesis	Design response
Deadlines can be overlooked	Due dates shown on task cards and calendar
Tasks across subjects are hard to track	My Tasks list with subject and priority
Study time can feel unstructured	Daily schedule on dashboard
Progress is difficult to see	Completed and pending task summary

3. User Personas

Persona	Arun	Priya
Profile	21-year-old college student	20-year-old university student
Goals	Finish assignments on time; organize multiple subjects	Build a steady study routine; review progress
Challenges	May forget deadlines; balances several subjects	Finds it difficult to prioritize and structure the day
Needs	Task list, due dates, priorities	Weekly planner, calendar, progress summary

These are illustrative personas for the concept. Validate the assumptions with actual student feedback where possible.

4. User Flow

Primary path: Open app → Welcome / Login → Dashboard → choose an action. From the dashboard, the user can add a task and return to the dashboard, view the task list and open task details, open the calendar, or view profile and progress.

New user path: Welcome / Login → Create Account → Dashboard. The wireframe prototype should link the visible navigation items to their matching screens.

5. Information Architecture

Main navigation: Home (Dashboard), Tasks (My Tasks), Calendar, Profile. Task-specific actions: Add Task, Task Details, Edit Task and Mark Completed.

6. Low-Fidelity Wireframes

Eight mobile screens are included in the accompanying editable PowerPoint wireframe deck and in the visual preview. The screens use a consistent blue-and-white visual system, simple controls, clear labels and repeated bottom navigation.

7. Screen Specifications

01 – Welcome / Login

StudyMate mark and tagline; email and password fields; forgot-password link; Login and Sign Up actions.

02 – Create Account

Full name, email, password and confirm-password fields; Create Account action; link back to Login.

03 – Dashboard

Greeting and date; today's progress card; daily schedule; upcoming task; bottom navigation.

04 – Add New Task

Task title, description, subject, due date and priority; Save Task action.

05 – My Tasks

All / Pending / Completed filters; task cards with due date and priority; bottom navigation.

06 – Calendar

Monthly calendar view with highlighted dates; upcoming events; bottom navigation.

07 – Task Details

Task title, subject, due date, description and priority; Mark Completed and Edit Task actions.

08 – Progress & Profile

Student profile summary; completed and pending task counts; progress bars; settings; bottom navigation.

8. Visual Design Guidelines

Token	Specification
Primary blue	#2476E8
Dark text	#172B4D
Pale blue	#EAF2FF
Background	#FFFFFF
Card background	#F4F7FB
Border	#D6DFEA
Typography	Sans-serif; clear title/body hierarchy
Spacing	Consistent 8 px spacing rhythm
Controls	Rounded rectangles, clear labels, touch-friendly sizing

9. Design Thinking Process

Empathize: Explore students' experiences managing assignments, deadlines and study time.
Define: Frame the design problem as the need for a simple, centralized student planning experience.

Ideate: Consider a dashboard, task list, calendar, priorities and progress summary.
Prototype: Create the eight low-fidelity screens and connect their main navigation paths.
Test: Ask representative students to complete common tasks and note confusion, missed controls and improvement ideas.

10. Usability Test Plan

Ask 3–5 students to try these tasks: (1) find tomorrow's assignment, (2) add a new task with a due date, (3) locate an event in the calendar, (4) mark a task completed, and (5) view their progress. Record task completion, points of confusion and suggestions. Do not report results until the test has actually been conducted.

11. Expected Outcome and Limitations

Expected outcome: a consistent eight-screen mobile wireframe concept that communicates the app structure and primary user journeys. This package is a design prototype only. It does not implement real authentication, notifications, data storage or a functioning calendar.

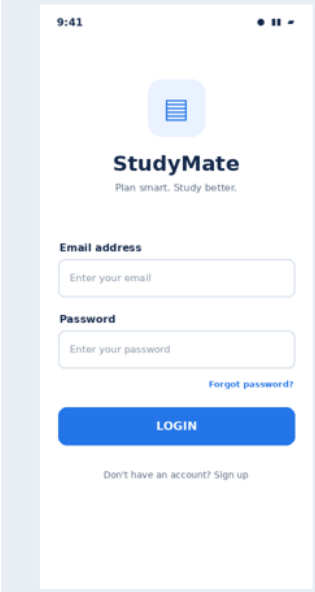

12. Conclusion

StudyMate demonstrates the early UI/UX design process for a student productivity app. It combines user needs, personas, navigation planning, low-fidelity screen layouts and a usability test plan. Feedback from students can guide the next iteration and later high-fidelity design.

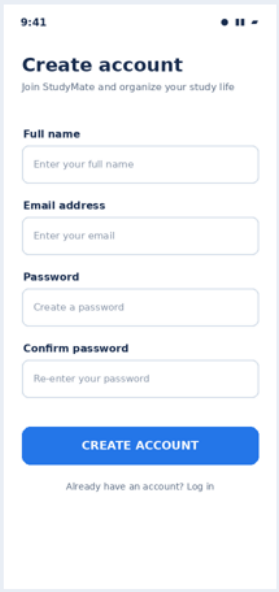

13. Submission Checklist

- ■ Replace student and college placeholders.
- ■ Add real user research notes if collected.
- ■ Review all eight screens.
- ■ Connect the prototype interactions in Figma if required.
- ■ Conduct and document usability testing if required.
- ■ Export the final report and submit the requested editable source / prototype link.

Note: The accompanying editable PowerPoint deck contains individual screen layouts built from editable shapes and text. If the internship specifically requires a native Figma file, recreate or import the layouts in Figma and submit the Figma share link; this package does not claim to be a native Figma project.
